

Spring boot design decisions

What is the Spring Framework

The spring framework is an entire Java framework that allows the creation of full Java applications initially released on the 1st of October 2002. It follows the model-view-controller through its Spring MVC module while also being open source.

Spring Boot is Spring's convention-over-configuration solution for creating stand-alone, production-grade Spring-based Applications that you can "just run" (Spring, 2021)

Why use Spring boot

Community research

Asking fellow students about the better choice between these 2, everyone said to choose Spring Boot instead of Jersey. The teacher also suggested using Spring boot unless we have another personal opinion on the matter.

Spring is also a much more popular choice which gives it a competitive edge and there are a lot of helpful learning materials for a beginner than in Jersey. Our group project will also use Spring Boot instead of Jersey which finalizes my decision
