# User feedback report

## User 1: Rossella(studies chemical engineering)

Good that you can search for flights immediately

The carousel should have relevant info or maybe ads would be smart

Cards should have an image but their arrangements is good. Maybe add better categories(instead of mystery put family).

Footer looks good

The navbar is pretty intuitive

Budget should be explained in the profile page, inspecting the flights are useful

Can I change photo?

Check availability should give you feedback when clicked

Finish button is pointless after booking flight

You should know how many rows a plane has

## User2: Sabin(studies software science)

Explain that you can search based on multiple criteria's

Searching for flight should close automatically after clicking search

Flight price should have a currency

Phone formatting of main page is good

Phone nav menu is intuitive

Phone profile should cover the entire page, it's too small

Phone booking flight formatting is not correct

The font when booking flights doesn't look professional

## Improvements

Based on the feedback from users, the following changes will be made:

- Adding explanation that flight searching can be done by multiple criteria's
- Main page formatting will be updated(especially the carousel)
- Adding a profile photo to a user could be done, but at a low priority
- The ticket booking process will be improved with missing information
- User experience improvements
- CSS formatting improvements
